JUMO

JUMO iTRON DR 100
Microprocessor Controller

with a 2-line LC display
for mounting on a 35mm DIN rail

Brief description

The JUMO iTRON DR 100 is a universal, freely programmable microprocessor controller which lends itself to a wide range of control applications.
The controller is available with one SPDT or 2 SPST relays.
Resistance thermometers, thermocouples as well as current and voltage signals can be connected to the freely configurable measurement input. Linearizations are stored for the usual transducers.
The controller features a 2-line, alphanumeric LC display for indicating the process value and setpoint, or for running dialogs.
Parameter setting is arranged dynamically, and the value is accepted automatically after two seconds.
Self-optimization, which comes as standard, establishes the optimum control parameters at the touch of a button. The basic version also includes a ramp function with an adjustable gradient as well as a timer function.
The iTRON DR 100 can be used as a 2-state controller with a limit comparator, or as a 3-state controller.
The controller is mounted on DIN rails and connected up via screw terminals with a max. conductor cross-section of 2.5mm².
A setup program and a PC interface are available as accessories, for easy configuration and parameterization from a PC.

Type 702060/ …

Overview of functions
Measurement input

Pt100, Pt1000 in 2-wire or 3-wire circuit, KTY11-6, thermocouples type L, J, U, T, K, N, S, R, B

current input 0/4 — 20 mA
or
voltage input 0/2 — 10V

Logic input

for connection to floating contact

Supply

110 — 240V AC +10% /-15%
48 — 63Hz,
20 — 53V AC/DC 48 — 63Hz

JUMO DR 100

Setup program

for configuration from a PC

Relay output

1 changeover contact or
2 make contacts

Logic output

voltage/current
0/5V, 0/20mA or 0/12V, 0/20mA
short-circuit proof

LC display

2-line display for visualizing measurement and parameters

Key features

- Freely configurable measurement input
- Ramp function
- Timer function
- Self-optimization
- Clear, easy-to-read alphanumeric display
- Sampling time 210 msec
- Setup program for configuration and archiving from a PC

06.08/00438840

Technical data

Input for resistance thermometer

Designation		Range	Accuracy[1]
Pt 100	EN 60751	-200 to +850°C	0.1%
KTY11-6	PTC	-50 to +150 °C	1%
Pt1000	DIN	-200 to +850°C	0.1%
Connection circuit		2-, 3-wire	
Sampling rate		210 msec (250 msec with active timer)	
Input filter		2nd order digital filter; filter constant adjustable from 0 — 100 sec	

Input for thermocouple

Designation				Range	Accuracy[1]
Fe-Con	L	DIN	43710	-200 to +900°C	0.4%
Fe-Con	J	EN	60584	-200 to +1200°C	0.4%
Cu-Con	U	DIN	43710	-200 to +600°C	0.4%
Cu-Con	T	EN	60584	-200 to +400°C	0.4%
NiCr-Ni	K	EN	60584	-200 to +1372°C	0.4%
NiCrSi-NiSi	N	EN	60584	-100 to +1300°C	0.4%
Pt10Rh-Pt	S	EN	60584	0 to +1768°C	0.4%
Pt13Rh-Pt	R	EN	60584	0 to +1768°C	0.4%
Pt30Rh-Pt6Rh	B	EN	60584	300 to 1820°C	0.4%
Cold junction				Pt100 internal	
Cold junction accuracy				± 1°C	
Sampling rate				210 msec (250 msec with active timer)	
Input filter				2nd order digital filter; filter constant adjustable from 0 — 100 sec	

1. The accuracy refers to the maximum range span.
   Reduced linearization accuracy with small ranges and short spans.

Analog input for DC voltage, DC current

Range	Accuracy	Input resistance
0 — 20 mA 4 — 20 mA	0.1%	fall of potential < 2V
0 — 10V 2 — 10V	0.1%	R_{IN} > 100 kΩ
Scaling	freely programmable within the limits	
Input filter	2nd order digital; filter constant adjustable from 0 — 100 sec	

Logic input

Connection	Function
Floating contact	configurable for key inhibit, level inhibit, ramp stop, setpoint switching, and for timer control

Measuring circuit monitoring

Transducer	Overrange/ underrange	Probe/ lead short-circuit	Probe/lead break
Thermocouple	is recognized	-	is recognized
Resistance thermometer	is recognized	is recognized	is recognized
Voltage 2 — 10V 0 — 10V	is recognized is recognized	is recognized -	is recognized -
Current 4 — 20 mA 0 — 20 mA	is recognized is recognized	is recognized -	is recognized -

Supply

Supply voltage	20 — 53V AC/DC, 48 — 63 Hz 110 — 240V AC +10% /-15%, 48 — 63 Hz

06.08/00438840

Power consumption	5 VA
Electrical safety	test voltages to EN 61 010 overvoltage category III, pollution degree 2
UL	valid for UL 61010-1 and CSA C22.2 No 61010-1

Outputs

Type	Relay output K1	Relay output K2	Logic output
70.2060/1XX, XXX, 000..	changeover contact, 3A at 250V AC resistive load; 100, 000 operations at nominal load	-	logic output 0/5V, 0/20mA (short-circuit proof)
70.2060/2XX, XXX, 113..	make contact, 3A at 250V AC resistive load; 100, 000 operations at nominal load	make contact, 3A at 250V AC resistive load; 100, 000 operations at nominal load	logic output 0/12V, 0/20mA (short-circuit proof)

Environmental conditions

Ambient temperature range	0 to +55°C
Storage temperature range	-30 to +70°C
Climatic conditions	75 % rel. humidity, no condensation
EMC	EN 61 326
Interference emission, immunity to interference	Class B, industrial requirements

1. All data refer to the full-scale value

Housing

| Material	polyamide (PA 6.6)
Mounting	on 35mm x 7.5mm DIN rail to EN 50 022
Operating position	vertical
Weight	approx. 160g
Data backup	EEPROM
Electrical connection	via screw terminals, conductor cross-section: 0.2 — 2.5mm^2

Dimensions

Type 702060/...
Ramp function

|		
The ramp function enables a defined approach of the PV from t_0 to the selected setpoint SP. The slope is set via a gradient (°C/min or °C/h) at the parameter level. On a change of setpoint, it will be active either as a falling or rising ramp.		
Self-optimization (SO)

|	SO in the approach phase	SO at the setpoint
The standard self-optimization facility enables the controller to automatically adapt to the process. Self-optimization determines the controller parameters for PI and PID controllers (proportional band, reset time, derivative time) as well as the cycle time and filter time constant of the digital input filter.		
Limit comparator

Function lk1 Window function: output is active (On) when the measured value is within a certain range (window) about the setpoint. **Function lk2** as lk1, but inverted signal function.		
Function lk3 lower limit signal Function: output is inactive when the measured value is below (setpoint - limit value) **Function lk4** as lk3, but inverted signal function.		
Function lk5 upper limit signal Function: output is inactive when the measured value is above (setpoint + limit value) **Function lk6** as lk5, but inverted signal function.		
Function lk7 Switching point does not depend on the controller setpoint; only AL determines the switching point. Function: output is active when the measurement is above the limit value. **Function lk8** as lk7, but inverted signal function.		
Timer function
Using the timer function, the control action can be influenced by means of an adjustable time $t_iО$. After the timer has been started (by power ON, pressing the key or through the logic input), the timer start value $t_iО$ is counted down to 0, either immediately or after the process value has gone above or below a programmable tolerance limit. When the timer has run down, different events can be triggered, such as control switch-off (output 0%) or setpoint switching. In addition, it is possible to implement timer signaling during or after the timer count, via an output.
The timer function can be used in conjunction with the ramp function and setpoint switching.

Table: timer function (using the example of an inverse 2-state controller)

Function	Start condition		
	Power ON	**Keys/logic input**	**Tolerance limit**
Time-limited control The control action is switched off after the timer has run down (output 0%)			
Time-dependent setpoint switching After the timer has been started, the process is controlled to setpoint SP2. When the timer has run down, the controller automatically switches to SP1.			
Time-delayed control The control action starts after the timer has run down.			———
Timer with signaling After the timer has started, $t_iО$ is counted down to 0. The control action is independent of the timer. With this timer function, too, the end of the timer count-down can also be signaled via an output.	Signaling after timer count-down (e.g. C122=3) 	Signaling from start to end of timing 	———

Connection diagram

	Supply as per nameplate	**AC** L1 line N neutral	**AC/DC** L+ L-
